

Introduction for Fisheries and Aquatic Biology

year	2011
URL	http://hdl.handle.net/2261/56052

CONTENTS

Preface	v
List of Editors and Authors	ix

Chapter I **AQUATIC ENVIRONMENT** **1**

1. Formation and Distribution of Aquatic Environments	2
1.1 Aqua planet	2
1.2 Nature of water	3
1.3 Vertical zonation of sea	5
1.4 Ocean current	7
2. Physical Environment	8
2.1 Physical property of seawater	8
2.2 Outline of ocean hydrographic structure	9
2.3 Introduction of fluid dynamics	15
2.4 Light environment	19
3. Chemical Environment	23
3.1 Biophile elements	23
3.2 Chemical environment in open ocean	26
3.3 Chemical environment in coastal waters and estuary	26
3.4 Chemical environment of inland waters	28
4. Dynamics in Euphotic Zone	28
4.1 Surface mixed layer	28
4.2 Surface mixed layer depth and biological production	29
5. Material Cycling	32
5.1 Concept of primary production	32
5.2 Primary production in the ocean	33
Further Comment	36

Chapter II **BIOLOGY AND ECOLOGY OF AQUA-SPHERE** **37**

1. Living Organisms in Aqua-Sphere	37
1.1 Advent and evolution of aquatic organisms	37
1.2 Procaryote and Protoctista	40
1.3 Plants	40
1.4 Animals	41

2.	Aquatic Ecosystems	45
2.1	Plankton and benthos	45
2.2	Typical ecosystems	46
2.3	Food chain and food web	48
2.4	Microbial loop in food chain	50
2.5	Secondary and higher producers	52
2.6	Top down control and bottom up control	54
2.7	Size dependant food chain and size distribution	55
2.8	Biodiversity	57
2.9	Spatial distribution and its uniformity	58
3.	Physiology of Aquatic Animals	59
3.1	Cells, tissues and organs	59
3.2	Ontogeny and growth of fish	60
3.3	Maturation and reproduction	63
3.4	Respiration and circulation	66
3.5	Nervous system and sensory organ	70
3.6	Endocrine system	74
3.7	Osmotic regulation	77
3.8	Biological defense	80
4.	Ecology of Aquatic Animals	83
4.1	Life history	83
4.2	Population structure	86
4.3	Reproduction	89
4.4	Feeding	91
4.5	Migration	94
4.6	Buoyancy and behavior	98
	Conclusion	101

Chapter III

AQUATIC RESOURCE AND PRODUCTION 105

1.	Fisheries Production	105
1.1	Japan	105
1.2	Global production	109
1.3	Fisheries technology	111
1.4	Fisheries management systems	114
1.5	Responsible fisheries	117
2.	Stock Fluctuations	118
2.1	Stock dynamics	118
2.2	Fluctuation of recruitment	120
2.3	Regime shifts	124
3.	Sustainable Resource Use	127
3.1	Unit of resource fluctuation and population	127

3.2	Russell's equation	127
3.3	Surplus production models	128
3.4	Dynamic pool model, reproduction model	131
3.5	Stock management	136
4.	Stock Enhancement	140
4.1	Contents of aquatic stock enhancement	140
4.2	Protection of propagation	142
4.3	Environmental improvement	142
4.4	Transplantation and release	144
4.5	Culture-based fisheries	145
4.6	Laws and regulations for stock enhancement	148
4.7	Contemporary issues of stock enhancement	149
5.	Aquaculture	150
5.1	What is aquaculture?	150
5.2	History of aquaculture	151
5.3	Aquaculture species	151
5.4	Aquaculture technologies	151
5.5	Disease and prevention of epidemics	159
	Conclusion	166

Chapter IV
CHEMISTRY OF AQUATIC ORGANISMS AND THEIR
UTILIZATION **169**

1.	Chemistry and Biochemistry of Aquatic Organisms	169
1.1	Proximate composition	169
1.2	Protein	171
1.3	Lipids	178
1.4	Low molecular weight components	184
1.5	Components of algae	189
1.6	Comparative biochemistry	194
1.7	Genetic engineering	198
2.	Nutritional and Physiological Function of Seafood	204
2.1	Nutritional function	204
2.2	Physiological functions	209
3.	Quality Control of Fish and Shellfish	212
3.1	Post mortem changes	212
3.2	Preservation of freshness	213
3.3	Chemical changes during preservation	215
4.	Seafood Safety	217
4.1	Fish and shellfish poisons	217
4.2	Other substances	222

5. Biochemical Use of Aquatic Natural Products	223
5.1 Bioactive substances	223
5.2 Other substances	229
Conclusion	230

Chapter V

RELATION BETWEEN AQUA-SPHERE AND HUMAN LIFE 233

1. Fisheries Industries in Japan	233
1.1 Modern and contemporary history of fisheries in Japan	233
1.2 Fisheries institutions in Japan	250
2. Issues Concerning Fisheries in Modern Times	259
2.1 Management	259
2.2 Aquatic environment	267
2.3 Multiple utilization of aqua sphere and fisheries	275
2.4 Consensus building in abandonment of fishery grounds and conservation of water body	282
3. Suggested Solutions	287
3.1 Pricing of aquatic products	287
3.2 Function of ecosystem (ecosystem service)	292
3.3 Debates over coastal fishery right (from a notebook of retired administrative officer)	295
3.4 International trade and fisheries resource conservation	301
